NZ's Specialist Hoof Care Manufacturers

Premier Wrangler

Doing hooves at the she, calving in the paddock, or treating stock at the run-off, the Premier Wrangler is perfect for getting the job done.

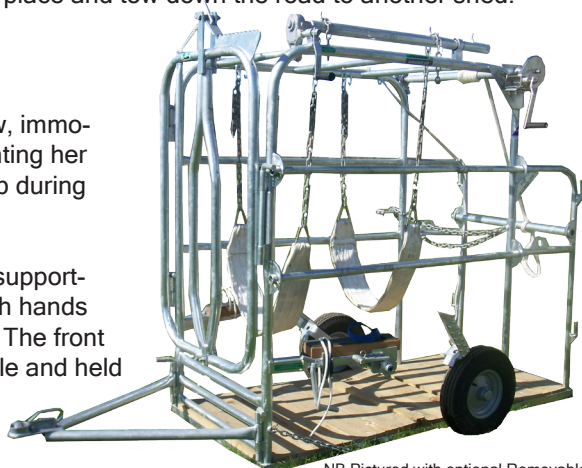

Hooves are a breeze in the Wrangler - the cow can't kick or go down - allowing you total access to treat front or back hooves. During calving the Wrangler can be left in the Springer paddock, giving you calving facilities without walking the cow to the shed.

When finished, drop the wheels into place and tow down the road to another shed.

How it Works

The double belly straps hold the cow, immobilising and relaxing her, and preventing her from 'going down' and breaking a hip during treatment.

The back hoof is then winched to a supporting bar leaving the operator with both hands free and out of the way of the knife. The front hoof is winched onto a wooden cradle and held securely with a second rope.

NB Pictured with optional Removable Handles and Braked Winch.

Optional Extras

Braked Leg Winch

Upgrade standard backleg winch to braked 4.5:1 stainless steel winch for added control and safety when lowering leg. Essential when safety is a factor.

Extension

Adds larger 3rd setting for treating back hoof on taller cows (>550kg/LW)

Rubber Matting

More grip for cow will make her more sure-footed and stand better. 10mm 20mm cleated

Removable Handle

Upgrade standard front foot winch from fixed handle to removable. Handle stows when not in use. Removes side obstruction to avoid farmer or cow leg from hitting it.
