NZ's Specialist Hoof Care Manufacturers

Race Wrangler

Whether you are planning a new shed or improving an existing one, a Wrangler is essential equipment for every farm.

How it Works

The double belly straps hold the cow, immobilising and relaxing her, and preventing her from 'going down' and breaking a hip during treatment.

The back hoof is then winched to a supporting bar leaving the operator with both hands free and out of the way of the knife. The front hoof is winched onto a wooden cradle and held securely with a second rope.

NB Pictured with optional Removable Handles.

Optional Extras

Braked Leg Winch

Upgrade standard backleg winch to braked 4.5:1 stainless steel winch for added control and safety when lowering leg. Essential when safety is a factor.

Extension

Adds larger 3rd setting for treating back hoof on taller cows (>550kg/LW)

Rubber Matting

More grip for cow will make her more sure-footed and stand better. 10mm 20mm cleated

Removable Handle

Upgrade standard front foot winch from fixed handle to removable. Handle stows when not in use. Removes side obstruction to avoid farmer or cow leg from hitting it.
